

Lego Robotics

Lego Robotics is an extracurricular program for 5th grade students. We build and program NXT robots to complete simple tasks. There are 2 Fall sessions and 2 Spring sessions lasting 7-8

weeks each. Each session is open to 14-16 students who work in pairs. They must be willing to work as a team. To sign up, please download the form linked at the bottom. I will upload a list of the session participants once the signup sheets have come in. Please check back to get the dates and specifics of each session.
