

Collision Repair & Refinishing

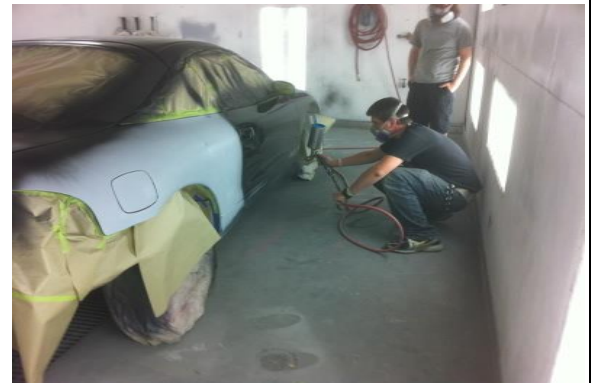

- Do you like a class that is informative, fun, and interesting?
- Do you like enriching your mind while working with your hands?

If the answer is “yes”, then Auto Collision is the class for you. If you’re thinking about a well-paying career and enjoy learning about cars and how to work on them, this is the place to get started. You will be in a real shop setting while working on actual vehicles.

This is to prepare you for the workplace or your post-secondary career. Moreover, you will come away with real life skills that will help you with any career and friendships that can last a lifetime. Remember, it’s all about giving you the opportunities to be successful in life. I hope to see you in class.

In all levels of Auto Collision classes you will learn how to repair dents, remove and replace automotive panels and assemblies, and accessorize your own car. Additionally, this class will teach you to design stripes, flames, blend and two-tone paint. It may be hard work; but, my students usually call it fun. When you gain a certain skill level, you will be working on actual client vehicles or even your very own car. You will learn how to operate a laser guided structural alignment machine while gaining the experience and knowledge for passing ASE and scholarship tests.

Collision Repair, 2 credits
Grade: 10-12

Recommendation: Uniform, respirator, and gloves required

First term training skills include safety, hand and power tools use, part removal and installation, metal repair, priming and painting techniques, basic measurements, paint ratio and mixing procedures. The Auto Collision course is a simulation of how an actual repair shop is managed. Material and supply fees may be required. Offered at Dale Jackson Career Center Only

Paint and Refinishing, 2 credits
Grade: 10-12

Prerequisite: Collision Repair

Advanced training in refinishing techniques, major collision repair, estimating, laser guided structural alignment, welding, and students may also take advantage of 4th term work placement program. Through the I-Car live program, students may gain the I-Car certification. Material and supply fees may be required. Offered at Dale Jackson Career Center Only
